## Instructions pour les parties à peindre

<b>FR</b>		Poncer l'élément apprêté doucement (P800-P1000). Eviter de poncer au travers de la couche primaire.
		Repérer et réparer les défauts, puis poncer les parties réparées doucement (P800-P1000). Appliquer un primaire d'accrochage adapté sur les parties creuses.
		Nettoyer entièrement avec un décapant silicone.
		Il faut s'assurer du bon accrochage du produit durant l'application de la peinture (risque de déformation) ! Suivre les consignes du fabricant de peinture en matière de dosage et de technique d'application ; les additifs élastiques spécifiés par le fabricant de peinture ont une grande importance. La désignation des composants figure à l'intérieur de l'élément (>.....<, par exemple >PUR-MF15<).
		<b>Ne pas chauffer la peinture (maximum 40°C) !</b>
